

Phone notifications in your Telegram

Notify for Android

Read selected notifications on your computer or another phone.

What Notify does

**A notification
arrives
on Android**

**You read it
in Telegram**

Notify forwards notifications from selected apps and SMS messages to your connected Telegram chat.

Forwarding requires internet access and Android permissions.

When it comes in handy

01 You are working at your computer

Read incoming notifications in Telegram without picking up your phone each time.

02 Your work phone stays at home

Receive its notifications on another device.
The source phone must stay on and online.

You choose what to forward

Your selected apps

Choose which apps you want to receive notifications from in Telegram.

Your schedule

Set quiet hours and adjust forwarding to suit your routine.

The content of selected notifications is sent to Telegram.

Useful with just one phone

Telegram on your computer

A second smartphone is optional.

Notify forwards notifications from your Android phone to Telegram, where you can read them on your computer.

For example, while working, studying or on a laptop call.

History and reminders

Coming in an upcoming update

Notification history

Search saved messages
and filter by app.

History starts saving after you enable it.
These features are being prepared for release.

Flags and reminders

Mark important messages
and set a reminder to revisit them.

In-app support

**Need help setting up
or using Notify?**

Open a support ticket
and chat with the
administrator directly
in the app.

Once a ticket is closed, open a new one for your next question.

Getting started

- 1 Install Notify on Android**
- 2 Request activation in the app**
- 3 Connect Telegram and choose your apps**

You will need a Telegram bot token and Chat ID to connect.
The app will request the necessary permissions.
